John Horsey, of the University of Vermont, Burlington, and William Foege, of the U.S. Centers for Disease Control and Prevention, made a similar but very different observation in a piece published in BMJ in July. In a meta-analysis published in the British Medical Journal (BMJ), they found that 79 per cent of people who were infected with H5N1 had had close contact with poultry, with an estimated 350 million H5N1 infections occurring in people. That's a very large number, even if the actual risk of death from H5N1 in people is extremely low. a1d647c40b
