Flobo is a .The Yawn A new documentary takes a look at what really goes on in our strange sleep habits. Ever wake up in the morning and get that sense of déjà vu? Something's been happening. The clothes you've slept in no longer fit, the phone is out of date, and you have a headache. You have a headache, right? But no, it's nothing serious. You were just dreaming that your phone flashed a message from an old acquaintance in whom you've had a distant interest for years, reminding you to check out his new blog or that clunky old website or whatever. It's not that unusual, says one of the most compelling new documentaries in the home entertainment marketplace, *The Yawn: A Modern Conundrum*. After all, dreams aren't like memories. Yet the dream is a funny thing: Where do they come from? What their function is? Is it even a deliberate choice or, rather, a stubborn inheritance born of genetic programming? Actually, if we dream, it's thanks in part to something that really is deliberate. When you sleep, your body remains inactive for a relatively short period of time. During that time, the body's "sensors" are dutifully monitoring the environment, the kinds of hazards that can injure or kill us. We don't dream that we're dreaming, but we do dream that we're "sleeping." Even our cerebral cortex, as one of those sensors, can send us this sophisticated message. Unfortunately, it's not very often that our brains are properly doped up for sleep. It's another sensor, called the sleep center, that coordinates the process. This one sometimes malfunctions, often thanks to diet. That's certainly the case in *The Yawn*, which was financed in part by the Con Edison Foundation. Written and directed by William Forsythe, it's an exercise in self-satisfied first-person storytelling, complete with a faux on-camera interview. Though Forsythe's questions are good and always friendly, the film's true subject matter, for all its timeliness, is simply the mundane. Like this recap you're reading, *The Yawn* is meant to

sector repair. Intra-aortic balloon pumping in burn patients. A review of use and current practice. Intra-aortic balloon pump counter-pulsation is widely used in the treatment of patients with post-cardiotomy circulatory failure, and few studies have reviewed its use in adult burn patients. In particular, it is not known if its use is associated with increased mortality. To review the recent literature and provide an update on the use of intra-aortic balloon pumping in burn patients. Studies have not shown a beneficial effect of IABP in the treatment of patients with burn injuries, and the use of IABP has been criticized on grounds that large volumes of blood are displaced across the diaphragm, which may cause respiratory complications and contribute to systemic inflammatory response syndrome.Q:
