You can buy this game in Hong Kong, Europe, Australia, North America, South America, Middle East, and Asia. For more information, please visit ©2014 SQUARE ENIX CO., LTD. All Rights Reserved. Author: GWT JsArray JSON I'm trying to develop a function in GWT that sends data from a client to the server using JSON. I'm not really good in javascript and I was wondering if someone can help me with this. I have a function that sends data from a client to a server as an array but it doesn't work. Here is the code: var listItem = [] var item = { list_id : "-1", artist : "Spotify", title : "Encore, encore", is_follow : "0", is_unfollow : "0" }; var z = 0; function sendThingie() { $.ajax({ type: "POST", url: "", data: item, dataType: 'json', contentType: "application/json", cache: true, success: function(response, status){ listItem[z] = response; z++; }, error: function(err){ alert(err.responseText); } }); } } I'm not sure how I can convert a variable to

Elden Ring

► Story You, a cowardly non-magical boy, living in a big city are recently summoned to the Lands Between by a mysterious woman who holds the key to the three elden lords' staffs. ► Characters You, the hero. A mage who was born to a noble family. A swordmaster from a powerful family. An adventurer who was once a nobleman's squire. A member of a sorceress' guild. A magic-user (a girl). ► Setting An island constructed of stone in the sea. An island with a very special "feastful" atmosphere. An island with long history and a legend. An island that never changes. An island where the people from the past still live on. A vast, mysterious land. ► Other Features The story is being told in fragments. A large world that seamlessly connects the various situations in the story. The flow of the plot changed and improved. A large volume of events that occur based on your progress. A long story that is over 20 hours long. Various other characters that live in the Lands Between. A Drama > Character development > Action. An adventure that is suited to the diverse tastes of players. ► System The time-based action RPG that combines the traditional turn-based battle system, and the traditional action RPG. The action RPG features a simple yet deep battle system that focuses on tactics, using the strengths of the adventurer and magic-user in order to properly position your characters. You can freely and dynamically combine the attack, shield, and other skills you equip to form your own battle strategies. The result is a deep, complex battle system. You can create a party of a maximum of eight characters, where the introduction and separation of each character is strongly emphasized. The individual actions of each party member, as well as the party's movements, are reflected in the battle. By advancing through battles, you can collect rare items as rewards. You can also extend the end of your adventure into a series of multi-hour story episodes. As you travel across the vast world of the Lands Between, you will find situations that differ in various ways. Through your travels, you can meet characters with new stories and interact with them. This invites you to come up with your own ideas. ► Asynchronous Online Play Enjoy asynchronous online play. No matter where you are and

What's new in Elden Ring:

The key to victory lies in the fulfillment of your goals. What will you choose? QoL is a unique fantasy role-playing game filled with charm and adventure. It stands out thanks to the excellence of its combat system and is filled with newly added characters, exciting dungeons, and even more. It is the second major title to be launched by the development team "Vertex Games."

Q: how to access class instance variable from custom class in php I am using php 5.4 class collection { public $collection; function __construct() { $this->collection = &new ArrayCollection(); } } $collection = new collection(); $collection->collection = new ArrayCollection(); $collection->collection->add(new collection); var_dump($collection->collection[0]); // Fatal error: Cannot use object of type collection as array in... This code give a fatal error, How do i access $collection->collection[0]? A: I'll leave this here if you ever stray and come back and Google yourself. :-) When you declare $collection->collection = &new ArrayCollection();, the first line says "Hey, ArrayCollection
